Exercise 2
Cannibals and Missionary Problem

The basic purpose of this exercise is to explore the workings of the cannibal and missionary clips program.

Use the (debugging) commands of clips to watch the flow of execution:

- (run 1)
- (watch facts)
- (watch activations)
- (agenda)
- (facts)
- (rules)

Hand in a very brief summary of how the program works (as determined from your exploration). Explain what assertions and retractions are made in the very first iteration and what statuses (i.e. the state variables) are generated in this process.
