Exercise 6
Breadth First Search
Water Jug Problem

Using the set of rules developed from exercise 5, set up a clips program to perform a breadth first search (use the example from the lecture as a pattern).

- The program should be set up to deliver all the possible solutions up to a given level of search. The maximum level should be setable.
- The program should print out the solutions as it finds them.

Send just the Clips program. I will run it to get the solutions.
